1: Important safety information

Read this manual before attempting to install the device!

Failure to observe recommendations included in this manual ∆ may be dangerous or cause a violation of the law. The manufacturer, Fibar Group S.A. will not be held responsible for any loss or damage resulting from not following the instructions of operating manual.

Do not modify!

Do not modify this device in any way not included in this manual.

Other devices

The manufacturer, Fibar Group S.A. will not be held responsi- Δ ble for any damage or loss of warranty privileges for other connected devices if the connection is not compliant with their manuals.

DANGER!

The device is powered with a secure voltage. Nevertheless, the user should be careful or should commission the installation to a qualified person.

DANGER!

To avoid risk of electrical shock, do not operate the device with wet or moist hands.

This product is intended for indoor use only in dry locations.

Do not use in damp or wet locations, near a bathtub, sink, shower, swimming pool, or anywhere else where water or moisture are present.

Not a toy!

This product is not a toy. Keep away from children and animals!

2: Description and features

2.1: Description

FIBARO RGBW Controller 2 is a universal, Z-Wave Plus compatible RGB/RGBW controller.

FIBARO RGBW Controller 2 uses PWM output signal, allowing it to control LED, RGB, RGBW strips, halogen lights and other resistive loads. It can also measure active power and energy consumed by the load. Controlled devices may be powered by 12 or 24V DC.

Inputs support momentary/toggle switches and 0-10V analog sensors, like temperature sensors, humidity sensors, light sensors etc.

2.2: Main features

- Compatible with any certified Z-Wave or Z-Wave Plus controller.
- Allows for controlling:
 - » RGB/RGBW LED strip,
 - » one-color LED strips,
 - » halogen lights,
 - » other compliant resistive loads.
- Allows for connecting to inputs:
 - » switches/buttons,
 - » 0-10V analog sensors or potentiometers.
- Active power and energy metering.
- Supports Z-Wave network Security Modes: S0 with AES-128 encryption and S2 Authenticated with PRNG-based encryption.
- Works as a Z-Wave signal repeater (all non-battery operated devices within the network will act as repeaters to increase reliability of the network).
- May be used with all devices certified with the Z-Wave Plus certificate and should be compatible with such devices produced by other manufacturers.

| i |
|---|
| |

The device is a Security Enabled Z-Wave Plus product and a Security Enabled Z-Wave Controller must be used in order to fully utilize the product.

3: Specifications

| Power supply | 12V/24V DC ±10% |
|---|---|
| Rated load current | 6A for channel, 12A total for all outputs |
| Power output | 144W combined for 12V 288W combined for 24V |
| Inputs | 4 inputs, 0-10V (configurable pull- up) or binary |
| Outputs | 4 outputs, PWM |
| PWM frequency | 244Hz |
| Maximum length of wires | 2m |
| Operating temperature | 0–40°C (32–104°F) |
| Storage temperature | -40–60°C (-40–140°F) |
| Radio protocol | Z-Wave (500 series chip) |
| Radio frequency | 868.4 / 869.85 MHz EU 908.4 / 916 MHz US 919.8 / 921.4 MHz ANZ 869.0 MHz RU |
| Transmit power | EIRP max. +2dBm |
| Range | up to 50m (164 ft) outdoors up to 40m (131 ft) indoors (depending on terrain and building structure) |
| Recommended wire cross-section area | 0.2–2.0mm ² (24–14 AWG) (depending on load current) |
| Dimensions (Length x Width x Height) | 42.35 x 36.90 x 17.5 mm (1.67" x 1.5" x 0.69") |
| Compliance with EU directives | RoHS 2011/65/EU RED 2014/53/EU |

i Radio frequency of individual device must be same as your Z-Wave controller. Check information on the box or consult your dealer if you are not sure.

i The maximum load for one channel is 6 A. Do not ex-ceed this value as it can permanently damage the device.

4: Installation

4.1: Before installation

Connecting the device in a manner inconsistent with this manual may cause risk to health, life or material damage.

- Connect only in accordance with one of the diagrams,
- The device is powered with secure voltage; nevertheless, the user should be extra careful or should commission the installation to a qualified person,
- **Do not** connect devices which are not compliant with the specification,
- Every connected device should be compliant with the relevant safety standards,
- RGBW Controller 2 and the load connected to its output must be powered by 12VDC or 24VDC stabilized power supply with short circuit protection. Connecting higher voltage or voltage not matching the load's voltage may cause damage to the device,
- Connecting long RGBW/RGB/LED strips may cause voltage drops, resulting in lower light brightness further from R/G/B/W outputs. To eliminate this effect it is recommended to connect few shorter strips in parallel connection instead of one long strip connected serially,
- RGBW Controller 2 has 0-10V inputs. There is no 0-10V output. Output is controlled by PWM at 244Hz,
- We recommend using momentary switches for comfortable light control.

Notes for diagrams:

GND – ground connector

IN1 – input connector for controlling OUT1 output

IN2 – input connector for controlling OUT2 output

IN3 - input connector for controlling OUT3 output

IN4 – input connector for controlling OUT4 output

OUT1 – output connector controlled by IN1 input (red LED color recommended)

OUT2 – output connector controlled by IN2 input (green LED color recommended)

OUT3 – output connector controlled by IN3 input (blue LED color recommended)

OUT4 – output connector controlled by IN4 input (white LED color recommended)

B – service button (used to add/remove the device)

4.2: Connection with RGBW/RGB LED strip

We recommend connecting LED strip channels in the same order as on the diagram (R - OUT1, G - OUT2, B - OUT3, W - OUT4).

If you want to connect RGB strip, use the same diagram, but do not connect OUT4 channel.

- 1. Disconnect the power.
- 2. Connect with the diagram below:

Diagram 1: Example connection with RGBW LED strip

(1 – power supply, 2 – switch, 3 – RGBW LED strip)

- 3. Verify correctness of connection.
- 4. Power the device.
- 5. Add the device to the Z-Wave network.

4.3: Connection with one-color LED strips

- 1. Disconnect the power.
- 2. Connect with the diagram below:

Diagram 3: Example connection with 4 one-color LED strips

(1 – power supply, 2 – switch, 4 – one-color LED strip)

- 3. Verify correctness of connection.
- 4. Power the device.
- 5. Add the device to the Z-Wave network.

4.4: Connection with halogen lights

- 1. Disconnect the power.
- 2. Connect with the diagram below:

Diagram 4: Example connection with 4 halogen lights

(1 – power supply, 2 – switch, 5 – halogen light)

- 3. Verify correctness of connection.
- 4. Power the device.
- 5. Add the device to the Z-Wave network.

4.5: Connection with 0-10V analog sensors

The 2-wire analog sensor requires pull-up resistor.

You can connect up to 4 analog sensors to IN1/IN2/IN3/IN4 terminals.

- 1. Disconnect power.
- 2. Connect with the diagram below:

Diagram 5: Example connection with 4 0-10V analog sensors

(1 – power supply, 6 – 3-wire 0-10V analog sensor,
7 – 2-wire 0-10V analog sensor, 8 – configurable pull-up resistors)

- 3. Verify correctness of connection.
- 4. Power the device.
- 5. Add the device to the Z-Wave network.
- 6. Change values of parameters:
 - Connected to IN1:
 - » Does not require pull-up: change parameter 20 to 0
 - » Requires pull-up: change parameter 20 to 1
 - Connected to IN2:
 - » Does not require pull-up: change parameter 21 to 0
 - » Requires pull-up: change parameter 21 to 1
 - Connected to IN3:
 - » Does not require pull-up: change parameter 22 to 0
 - » Requires pull-up: change parameter 22 to 1
 - Connected to IN4:
 - » Does not require pull-up: change parameter 23 to 0
 - » Requires pull-up: change parameter 23 to 1

5: Adding to Z-Wave network

Adding (Inclusion) – Z-Wave device learning mode, allowing to add the device to existing Z-Wave network.

i Full DSK code is present only on the box, make sure to keep it or copy the code.

5.1: Adding manually

To add the device to the Z-Wave network **manually**:

- 1. Power the device.
- 2. Set the main controller in (Security/non-Security Mode) add mode (see the controller's manual).
- 3. Quickly, three times click the service button.
- 4. If you are adding in Security S2 Authenticated, input the underlined part of the DSK (label on the box).
- 5. LED will start blinking yellow, wait for the adding process to end.
- 6. Adding result will be confirmed by the Z-Wave controller's message and the LED:
 - Green successful (non-secure, S0, S2 Unauthenticated),
 - Magenta successful (Security S2 Authenticated),
 - Red not successful.

5.2: Adding using Smart Start

SmartStart enabled products can be added into a Z-Wave network by scanning the Z-Wave QR Code present on the product with a controller providing SmartStart inclusion. SmartStart product will be added automatically within 10 minutes of being switched on in the network range.

To add the device to the Z-Wave network **using SmartStart**:

- 1. To use SmartStart your controller needs to support Security S2 (see the controller's manual).
- 2. Enter the full DSK string code to your controller. If your controller is capable of QR scanning, scan the QR code placed on the label on the box.
- 3. Power the device.
- 4. Wait for the adding process to start (up to few minutes), which is signalled with yellow LED blinking.
- 5. Adding result will be confirmed by the Z-Wave controller's message and the LED:
 - Green successful (non-secure, S0, S2 Unauthenticated),
 - Magenta successful (Security S2 Authenticated),
 - **Red** not successful.

i In case of problems with adding the device, please reset the device and repeat the adding procedure.

6: Removing from Z-Wave network

Removing (Exclusion) – Z-Wave device learning mode, allowing to remove the device from existing Z-Wave network. Removing also results in resetting the device to factory defaults.

To **remove** the device from the Z-Wave network:

- 1. Power the device.
- 2. Set the main controller into remove mode (see the controller's manual).
- 3. Quickly, three times click the service button.
- 4. LED will start blinking yellow, wait for the removing process to end.
- 5. Successful removing will be confirmed by the Z-Wave controller's message and red LED colour.

7: Operating the device

7.1: Operating the device using switches

Controlling connected loads in RGBW mode (default)

Input can control output only with the same number (e.g. switch connected to IN1 controls load connected to output OUT1). Perform following actions on inputs to change state of the connected load:

1xclick – change to the opposite one (ON/OFF)

A single click switches between the OFF state and the last non-OFF state. It means it may set the colour back, but the light may not light up as it doesn't change the brigthness.

- 2xclick set colour to 100%
- hold/release dimm/brighten colour

Controlling connected loads in HSB mode

HSB mode is enabled by setting parameter 150 to 1. Inputs correspond to different components in HSB colour space: IN1 – Hue, IN2 – Saturation, IN3 – Brightness and IN4 input controls OUT4 output. Perform following actions on inputs to change values of the components:

- 1xclick when value is 0 restore last set value
- 1xclick when value is not 0 set value to 0
- 2xclick set value to max
- hold/release increase/decrease value

When you hold the button connected to IN1, you revolve around the cone on the H (Hue) axis.

When you hold the button connected to IN2, you change the saturation (S).

When you hold the button connected to the IN3, you change the brightness (B).

Remember that if the saturation is too low, you may not notice any changes while holding IN1.

More information about the behaviour of the button i and HSB mode can be found in our knowledge base.

Other actions

• 1,2,3xclick/hold/release – activate scene in the controller for specific action (requires prior configuration)

7.2: Visual indications

The built-in LED light shows current device status.

After powering the device:

- Green device added to a Z-Wave network (without Security S2 Authenticated)
- Magenta device added to a Z-Wave network (with Security S2 Authenticated)
- Red device not added to a Z-Wave network

Update:

- Blinking cyan update in progress
- Green update successful
- Red update not successful

Menu:

- Blinking green entering the menu (added without Security S2 Authenticated)
- Blinking magenta entering the menu (added with Security S2 Authenticated)
- Blinking red entering the menu (not added to a Z-Wave network)
- Green reset energy consumption memory
- Yellow reset to factory defaults

7.3: Menu

Menu allows to perform Z-Wave network actions. In order to use the menu:

- 1. Press and hold the service button to enter the menu, device blinks to signal adding status (see 7.2: Visual indications).
- 2. Release the service button when device signals desired position with colour:
 - **GREEN** reset energy consumption memory
 - YELLOW reset to factory defaults
- 3. Quickly click the service button to select, 2 blinks of the same colour will confirm the selection.

7.4: Resetting to factory defaults

Reset procedure allows to restore the device back to its factory settings, which means all information about the Z-Wave controller and user configuration will be deleted. Resetting to factory defaults does not reset energy consumption memory.

i Resetting the device is not the recommended way of removing the device from the Z-Wave network. Use reset procedure only if the primary controller is missing or inoperable. Certain device removal can be achieved by the procedure of removing described.

- 1. Press and hold the service button to enter the menu.
- 2. Release service button when the device glows yellow.
- 3. Quickly click the service button to confirm.
- 4. After few seconds the device will be restarted, which is signalled with the red colour.

8: Activating scenes

The device can activate scenes in the Z-Wave controller by sending scene ID and attribute of a specific action using Central Scene Command Class.

In order for this functionality to work, connect momentary or toggle switch to the IN1-IN4 inputs and set parameters 20-23 to 2, 3 or 4 (depending on type of switch).

Scene IDs for inputs

| Input | Scene ID |
|-------|----------|
| IN1 | 1 |
| IN2 | 2 |
| IN3 | 3 |
| IN4 | 4 |

Attributes for actions

| Action | Attribute | |
|-----------------------|---------------------|----|
| Switch clicked once | Key Pressed 1 time | 1. |
| Switch clicked twice | Key Pressed 2 times | |
| Switch clicked thrice | Key Pressed 3 times | |
| Switch held* | Key Held Down | |
| Switch released* | Key Released | |

for toggle switches

16

9: Configuration

9.1: Associations

Association (linking devices) – direct control of other devices within the Z-Wave system network.

Associations allow:

- reporting the device status to the Z-Wave controller (using Lifeline group),
- creating simple automations by controlling other devices without participation of the main controller (using groups assigned to actions on the device).

Commands send to 2nd–10th association groups rei flect inputs operation according to device configuration, e.g. turning the first channel on using input will send frame responsible for the same action.

The device provides the association of 10 groups:

1st association group - "Lifeline" reports the device status and allows for assigning single device only (main controller by default).

2nd association group - "RGBW Sync" allows to synchronize state of other FIBARO RGBW Controller devices (FGRGBW-442 and FGRGB-WM-441) - do not use with other devices.

3rd association group - "On/Off (IN1)" is used to turn the associated devices on/off reflecting IN1 operation.

4th association group - "Dimmer (IN1)" is used to change level of associated devices reflecting IN1 operation.

5th association group - "On/Off (IN2)" is used to turn the associated devices on/off reflecting IN2 operation.

6th association group - "Dimmer (IN2)" is used to change level of associated devices reflecting IN2 operation.

7th association group - "On/Off (IN3)" is used to turn the associated devices on/off reflecting IN3 operation.

8th association group - "Dimmer (IN3)" is used to change level of associated devices reflecting IN3 operation.

9th association group - "On/Off (IN4)" is used to turn the associated devices on/off reflecting IN4 operation.

10th association group – "Dimmer (IN4)" is used to change level of associated devices reflecting IN4 operation.

i Association groups 2-10 can be triggered only from buttons connected to IN1-IN4 and will not work for 0-10V sensors.

The device allows to control 5 regular or multichannel devices per an association group, with the exception of "Lifeline" that is reserved solely for the controller and hence only 1 node can be assigned.

Assocation groups mapping

| Root | Endpoint | Association group in endpoint |
|----------------------|---------------|----------------------------------|
| Association Group 1 | Endpoint 1-9* | Association Group 1 |

9.2: Advanced parameters

The device allows to customize its operation to user's needs using configurable parameters.

The settings can be adjusted via Z-Wave controller to which the device is added. The way of adjusting them might differ depending on the controller.

In the FIBARO interface parameters are presented as simple options in Advanced Settings of the device.

Available parameters:

| 1. | Remember device status before the power failure | | |
|---|---|---|--|
| This parameter determines how the device will react in the event of power supply failure (e.g. power outage or taking out from the electrical outlet). | | | |
| After the power supply is back on, the device can be restored to previous state or remain switched off. The sequence is not remem bered after the power returns. After power failure, the last color set before the sequence will be restored. | | | |
| Parame | ter size | 1B | |
| Defaul | t value | 0 | |
| Avai | lablo | 0 - device remains switched off | |
| Available values | | 1 - device restores the state from before the power failure | |
| 20. | | Input 1 - operating mode | |
| This parameter allows to choose mode of 1st input (IN1). Change depending on connected device. | | · • | |

11: Regulations

This device complies with Part 15 of the FCC Rules

Operation is subject to the following two conditions:

1. This device may not cause harmful interference

2. This device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes and modifications not expressly approved by the manufacturer or registrant of this equipment can void your authority to operate this equipment under Federal Communications Commission's rules.

Industry Canada (IC) Compliance Notice

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme aux normes d'exemption de licence RSS d'Industry Canada. Son fonctionnement est soumis aux deux conditions suivantes : (1) cet appareil ne doit pas causer d'interférence et (2) cet appareil doit accepter toute interférence, notamment les interférences qui peuvent affecter son fonctionnement.

Legal Notices

All information, including, but not limited to, information regarding the features, functionality, and/or other product specification are subject to change without notice. Fibaro reserves all rights to revise or update its products, software, or documentation without any obligation to notify any individual or entity.
